Overview

These postings are tips for using Docker services.

Docker service "access forbidden"

Running or installing your Docker image on a new server is denied "access forbidden":

```bash
./rebuild_my_docker.sh
Sending build context to Docker daemon 241.9MB
Step 1/31 : FROM giterdone.crbs.ucsd.edu:8443/ncmir/dev-cdeep3m-docker-c11:latest as nc
Read "https://giterdone.crbs.ucsd.edu:8443/v2/ncmir/dev-cdeep3m-docker-c11/manifests/latest": denied: access forbidden
```

To resolve, explicitly log in to the gitdone service to authenticate yourself.

```
docker login giterdone.crbs.ucsd.edu:8443
```
